

### ◆ Features:

- ✦ Installation of imported anti-interference device, high sensitivity, can detect 0.8-1.2mm diameter balls with the normal detection height(10-15cm),
- ✦ High sensitivity, anti-interference; Use the aluminum alloy, the machine is more durable.
- ✦ Easy installation of the carry material structure, convenience for daily maintenance and clean out; photoelectric control magnetic field work
- ✦ When the metal is detected, the machine will automatically alarm, the conveyor will stop and return automatically.
- ✦ Flexible modular design can be customized according to different requirements

- + Fast transmission speed, suitable for assembly line;
- + Supporting the assembly line or automatic control devices.
- + Counting the total number of eligible and defective products accurately
- + Can install rejecting devices (such as the flap, air blowing, putter, etc.) according to the requirements of the customers.

### ◆ Application:

Mainly used for: aluminum foil packaging and packaging products containing multi-moisture food / meat products testing and other industries, used to detect the loss of raw materials or products in the stainless steel ball cleaning wire and other magnetic metal.

### ◆ Technical parameters:

Type	Standard			Non-standard				
<b>Detection Width(mm)</b>	300-450			500(Customized)				
<b>Detection Height(mm)</b>	100	120	150	200	250	300	350	400
<b>Sensitivity:Fe(mm)</b>	0.6-0.8	0.8-1.0	1.0-1.2	1.5	2.0	2.5	3.0	3.0
<b>Alarm Method</b>	Audible and visual alarm, conveyor belt return automatically							
<b>Material</b>	Full 304 Stainless Steel							
<b>Dimension</b>	1500(L)x700(W)x900(H)MM
